

## Quality Policy

Delta Star Power Project Limited is committed to delivering high-quality, sustainable energy solutions that exceed customer expectations while adhering to stringent environmental and regulatory standards. We actively integrate Net Zero and sustainability principles into our business operations.

### Our Primary Objectives:

- Building mutually beneficial relationships with partners.
- Ensuring impeccable quality and adherence to stated timelines for the design, construction, and installation of renewable energy power plants, including solar PV power plants.
- Increasing customer trust and loyalty to secure the long-term profitability of the company.

### 1. Expanding Renewable Energy Projects

- Increasing the design, construction, and installation of power plants powered by renewable energy sources.

### 2. ISO 14001 on environmental management systems (EMS)

- Creating an effective quality management system in line with customer, legal, and stakeholder requirements.
- Ensuring continuous improvement of the management system.

### 3. Business Process Optimization

- Organizing and optimizing processes related to the design, construction, and installation of renewable energy power plants.

### 4. Market Expansion Strategy

- Developing a strategy for entering external markets to provide services and establish our own production capabilities.

By embracing these principles, Delta Star Power Project Limited is dedicated to achieving operational excellence while fostering sustainability and ensuring long-term success.
